

- TERRACOTTA
- QUARRY TILES
- PORCELAIN TILES
- ACID RESISTANT SURFACES

WHAT IT'S FOR

- Removes dirt and building-site residues.
- Eliminates any saline efflorescences.
- Cleanses and removes deposits.
- It is essential for terracotta when other normal buffered acids for deposit removing are not effective.

ADVANTAGES

- Buffered acid, does not produce harmful fumes for the user and the environment: it does not contain hydrochloric acid.
- It has longer working time than pure acids which have an instant reaction and limited performance time.
- It's ideal for applying on vertical surfaces due to its viscosity.
- It removes deposits and cleans at the same time because it also contains surfactants.

HOW TO USE IT

Dilution: between 1:5 and 1:10 according to the level of dirt to be removed.

Application:

For residues from laying floors: on porous materials such as terracotta and stone, wet the surface well with water before washing. Depending on the extent of the deposits to be removed, dilute 1 litre of FILAPHZERO in 5 or 10 litres of water. Apply this solution to the surfaces, leaving it to act for 4-5 minutes to help dissolve the dirt. Then use a large brush or single-disc cleaning machine fitted with a suitable disc (e.g. brown for orange), lifting all residues using a cloth or liquid vacuum cleaner. Rinse with plenty of water.

For walls and vertical surfaces: before washing, wet the surface well with water. Use a brush to apply the product undiluted. Leave to act for 4-5 minutes, then rub with a large brush or other similar item and rinse well, if possible using a water jet cleaner.

Caution:

FILAPHZERO is a highly concentrated product, please only use when the level of dirt requires it. Do not use FILAPHZERO on marble and in general on materials that are sensitive to acids. Before applying the product, we recommend testing its reaction on a small area of the surface.

DILUTIONS AND COVERING

With one litre:

Terracotta 1:5.	20 m ²
Porcelain tiles 1:5.	40 m ²

"Coverage shown is for guidance purposes only and refers to single coats"

Packaging

- 1 litre cans in boxes of 12.
- 5-litre cans in boxes of 4.

WARNINGS

- Keep out of reach of children.
- Do not disperse into the environment after use.

TEMPERATURES

Storage temperature: from 5° to 30° C
The product should be applied to materials with temperature between 5° and 30° C.

CONTAINS

Non-ionic surfactants less than 5%, cationic surfactants less than 5%.
Other ingredients: perfumes.

LABELLING

Signal words: Danger

Hazard indication: May be corrosive to metals. Causes severe skin burns and eye damage. Harmful to aquatic life with long lasting effects.

Caution recommendations: If medical advice is needed, have product container or label at hand. Keep out of reach of children. Keep only in original container. Do not breathe dust / fume / gas / mist / vapours / spray. Wear protective gloves / clothing and eye / face protection. Immediately call a POISON CENTER / doctor. Absorb spillage to prevent material damage. Dispose of contents / container in accordance with local/regional/national/international regulation. Contains: PHOSPHORIC ACID, HYDROCHLORIC ACID, OLEYL BIS(2-HYDROXYETHYL)AMINE.

TECHNICAL FEATURES

Appearance: liquid
Colour: light hazelnut brown tint
Odour: pungent
Density: 1.115 kg/l
pH: 0.8 (solut.10% in water)

This information is the result of our most up-to-date technical know-how and is based on ongoing laboratory research and testing. Nevertheless, for reasons beyond our control, any suggestions always require appropriate analysis, testing and monitoring. Fila shall not accept any responsibility for improper use of its products.
